

# Providing Added Protection

Ingersoll Rand's HandPunch and HandKey platens now come with the power of silver!

Silver is a natural, yet powerful anti-microbial that has been used for many centuries. This coating will not change the look or feel of the platen, nor does it require special cleaning; instead it protects surfaces 24 hours a day against bacteria, mold and fungi.

This anti-microbial coating will neither wear out nor rub off of the HandPunch and HandKey platen, making it effective for the lifetime of your terminal.

Ingersoll Rand's Security Technologies Sector is a leading global provider of products and services that make environments safe, secure and productive. The sector's market-leading products include electronic and biometric access-control systems; time-and-attendance and personnel scheduling systems; mechanical locks; portable security; door closers, exit devices, architectural hardware, and steel doors and frames; and other technologies and services for global security markets.

# F-Series Family HandPunch HandKey

with BioCote® Anti-microbial  
Protected Platens

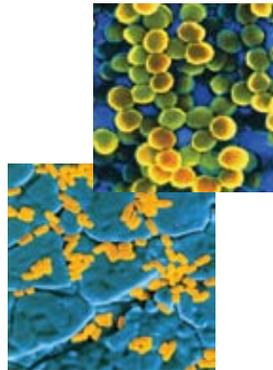

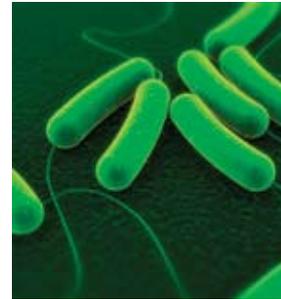

# Helping you prevent the spread of bacteria

*Ingersoll Rand F-Series HandPunch and HandKey platens now come with a BioCote® anti-microbial coating. This silver-based agent is embedded into the materials used to produce the platen during the manufacturing process. BioCote inhibits microbial growth, making the platen's surface cleaner and more hygienic for the life of the product.*

Even in the cleanest of environments, microbes, such as bacteria, mold and fungi will begin to multiply on surfaces between cleanings, causing a build up of grime and germs.

BioCote gives products continuous anti-microbial protection, working as an invisible line of defense against a broad spectrum of bacteria. Used in conjunction with normal cleaning practices, it inhibits microbial growth that can cause unpleasant odors and deterioration of products.

It's a fact—bacteria is everywhere. But the HandPunch and HandKey terminals with an anti-microbial platen can help reduce the build up of bacteria by up to 99.9% over a 24-hour period.

This is great for applications in all markets including:

Healthcare

Education

Laboratories

Food Service & Packaging
