## **WHY TIME STAMPS?**

Electric Time, Date, Numbering, and Text Stamps have been produced since before 1920. The so called "Time Stamp", while similar in function to the time recorder is a totally different device and is used in quite different applications. Time Stamps are designed for much heavier duty use than time recorders. Whereas 400 imprints per day is medium to heavy duty for the average time recorder, it is not unusual for time stamps to print 1000 or more times per day. Time Recorders are usually designed to print on time card stock while Electric Stamps print on a wide range of surfaces from onion skin paper to heavy cardboard, foil, or multiple copy forms.

Time/Date Stamps and Electric Stamps that we manufacture are desk or tabletop mounted devices.

As with electromechanical time recorders, the type head is driven with a synchronous motor and time accuracy is a function of electric power frequency. This ensures accuracy in almost all countries. Printing is actuated by a trigger-trip microswitch when a document is inserted and accomplished by a solenoid driven impact printer. Print pressure is adjusted by a knob control located inside the case thus allowing quality of print to suit the needs of the documents to be imprinted. A self-reversing long life ribbon assists in obtaining quality printing over the ribbon life.

## **WHO BUYS ELECTRIC STAMPS?**

Acroprint Stamps are needed by any organization or business that needs to know when, where, or by whom any type of document or paper was received, processed or forwarded. Typical USER'S are:
